

Technician Team Scenario Maysville KY

This morning at 7:00a.m., Crew B with 7 miners entered the mine to start their shift. Approximately 8:15a.m. a rock burst occurred at the East Panel Cross Cut.

Approximately 8:20a.m. the surface Foreman tried to make contact with Crew B with the hard line telephone line system and did not make any communication.

At 10:05a.m. the company is still not able to establish communication with Crew B underground.

We have called all of the Government Agencies for help.

The electrical power to the mine is available for use when needed. The electrical power to the mine has been locked out and guarded. Guards have been posted at the entrance of the mine and at the main fan.

Your Mine Rescue Team is to continue exploring the East Side of the mine. There is a fully equipped Mine Rescue Team located at the Fresh Air Base and they are ready to serve as your Team's back-up.

We would like your Mine Rescue Team to explore the rest of the mine, account for all missing miners and bring any live miners to the surface.
