

RMMRC PRESHIFT 2024

STATEMENT

You have been called upon to complete the on-shift examination of MMU 004-1 (3 hours prior to the 8-hour interval of the next shift). The Section foreman in this section was in the process of his on-shift examination and was compelled to leave the mine due to an emergency call from home. The results of the intake air reading and dust parameter checks are complete and recorded. The foreman left you a calibrated proximity locator at the check-in/out station. The section is producing and there is a 6-man crew conducting normal mining operations present. The lead man is an experienced miner, but is not a certified examiner. Please examine the section for hazards and/or violations of 30 CFR Part 75.
